TUGAS 3 REACT JS

Nama : Ahmad Fachri

Nim : 0110223121

Kampus : STTNF

1. Membuat file src/Utils/books.js untuk data semua buku

```jsx
const books = [
  {
    id: 1,
    title: "50 to 20 - Pesan dari Paruh Perjalanan",
    author: "Henry Manampiring",
    year: 2024,
    description: "Apa yang didapatkan dari 50 tahun menjalani hidup? Banyak kesalahan dan kegagalan, tapi juga pelajaran dan harapan
    image: "https://s3-ap-southeast-1.amazonaws.com/ebook-previews/107803/323552/1.jpg"
  },
  {
    id: 2,
    title: "Atomic Habits",
    author: "James Clear",
    year: 2018,
    description: "Orang mengira ketika Anda ingin mengubah hidup, Anda perlu memikirkan hal-hal besar. Namun pakar kebiasaan terken
    image: "https://ebooks.gramedia.com/ebook-covers/49184/image_highres/ID_AHPK2019MTH09AHP.jpg"
  },
  {
    id: 3,
    title: "Filosofi Teras",
    author: "Henry Manampiring",
    year: 2018,
    description: "Apakah kamu sering merasa khawatir akan banyak hal? Baperan? Susah move-on? Mudah tersinggung dan marah-marah di

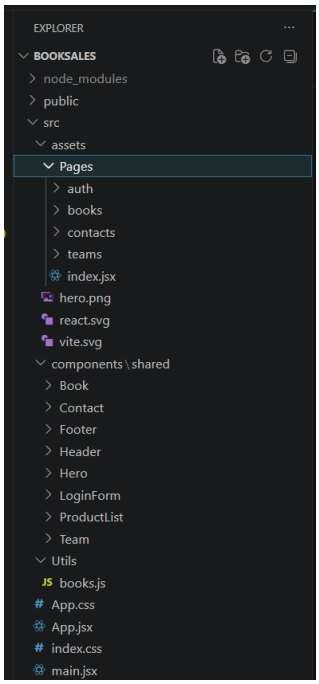
  )
];

export default books;
```

2. Struktu Folder



3. Menampilkan data buku di dalam halaman best seller (ProductList) dengan menggunakan fungsi .map() untuk merender komponen Card buku secara otomatis

```
src > components > shared > ProductList > index.jsx > ProductList
4   ault function ProductList() {
23
24    <div className="album py-5 bg-body-tertiary" id="product">
25        <div className="container">
26            <div className="row row-cols-1 row-cols-sm-2 row-cols-md-3 g-4">
27                {bestSellers.map((book) => (
28                    <div className="col" key={book.id}>
29                        <div className="card shadow-sm h-100">
30                            <img
31                                src={book.image}
32                                alt={book.title}
33                                className="card-img-top"
34                                style={{ height: "225px", objectFit: "contain", backgroundColor: "#f8f9fa", padding: "10px" }}
35                            />
36                            <div className="card-body d-flex flex-column">
37                                <h5 className="card-title fw-bold">{book.title}</h5>
38                                <p className="card-text text-muted" style={{ fontSize: "0.9rem" }}>
39                                    {book.description}
40                                </p>
41                                <div className="d-flex justify-content-between align-items-center mt-auto">
42                                    <div class="btn-group w-100">

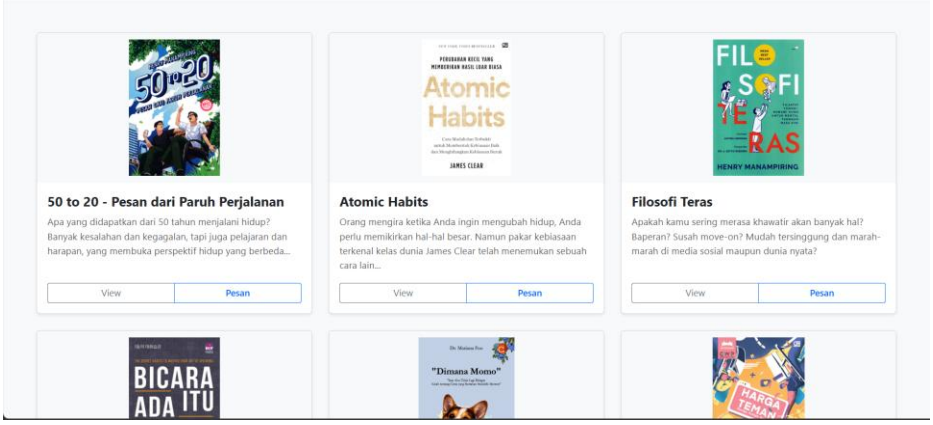
44                                        <button type="button" class="btn btn-sm btn-outline-primary w-50 fw-semibold">Pesan</butt
45                                    </div>
46                                </div>
47                            </div>
48                        </div>
49                    </div>
50                ))}
51
52            </div>
53        </div>
54    </div>
55  >
56
```



4. Menampilkan data buku di dalam halaman Book dengan menggunakan fungsi .map() untuk merender komponen Card buku secara otomatis

```
books.js | App.jsx | index.jsx ...\login | index.jsx ...\contacts | index.jsx ...\books | index.jsx ...\Book | index.jsx ...\ProductList
src > components > shared > Book > index.jsx > Book > handleInputChange
3   default function Book() {
75          </div>
76      </div>
77      <div className="row row-cols-1 row-cols-sm-2 row-cols-md-3 g-4">
78          {bookList.map((book) => (
79              <div className="col" key={book.id}>
80                  <div className="card shadow-sm h-100">
81                      <img
82                          src={book.image}
83                          alt={book.title}
84                          className="card-img-top"
85                          style={{ height: "225px", objectFit: "contain", backgroundColor: "#f8f9fa", padding: "10px" }}
86                      />
87                      <div className="card-body d-flex flex-column">
88                          <h5 className="card-title fw-bold">{book.title}</h5>
89                          <h6 className="card-subtitle mb-2 text-muted">{book.author} - {book.year}</h6>
90                          <p class="card-text text-muted mt-2" style={{ fontSize: "0.9rem" }}>
91                              {book.description}
92                          </p>
93                          <div class="d-flex justify-content-between align-items-center mt-auto pt-3">
94                              <div class="btn-group w-100">
95                                  <button type="button" class="btn btn-sm btn-outline-secondary w-50">Detail</button>
96                                  <button type="button" class="btn btn-sm btn-primary w-50 fw-semibold">Pinjam</button>
97                              </div>
98                          </div>
99                      </div>
100                 </div>
101             </div>
102         ))}
103     </div>
104 </div>
105
```

5. Menambahkan Fitur Tambah buku dengan Hooks, mengimplementasikan fitur penambahan data buku secara dinamis di halaman Book dengan memanfaatkan React Hooks, yaitu useState. Fitur ini memungkinkan pengguna untuk memasukkan data buku baru melalui form, yang kemudian akan langsung dirender ke dalam daftar buku tanpa perlu reload halaman.

src > components > shared > Book > index.jsx > Book > handleInputChange

```jsx
import React, { useState } from 'react';
import books from '../../../Utils/books';
export default function Book() {
    const [bookList, setBookList] = useState(books);
    const [newBook, setNewBook] = useState({
        title: '',
        author: '',
        year: '',
        description: '',
        image: ''
    });

    const handleInputChange = (e) => {
        const { name, value } = e.target;
        setNewBook({
            ...newBook,
            [name]: value
        });
    };

    const handleAddBook = (e) => {
        e.preventDefault();

        const bookToAdd = {
            id: bookList.length + 1,
            title: newBook.title,
            author: newBook.author,
            year: newBook.year,
            description: newBook.description,
            image: newBook.image ? newBook.image : "https://placehold.co/150x225?text=Buku+Baru"
        };

        setBookList([...bookList, bookToAdd]);
        setNewBook({ title: '', author: '', year: '', description: '', image: '' });
    };
```

```jsx
    return (
        <div class="container py-5">
            <div class="text-center mb-5">
                <h1 class="fw-light">Semua Koleksi Buku</h1>
                <p class="lead text-body-secondary">Jelajahi seluruh koleksi buku bacaan kami di sini.</p>
            </div>

            {/* --- FORM TAMBAH BUKU (BONUS TUGAS POINT 7) --- */}
            <div class="card shadow-sm mb-5 mx-auto" style={{ maxWidth: '600px' }}>
                <div class="card-header bg-primary text-white">
                    <h5 class="mb-0">Tambah Buku Baru</h5>
                </div>
                <div class="card-body">
                    <form onSubmit={handleAddBook}>
                        <div class="mb-3">
                            <label class="form-label fw-semibold">Judul Buku</label>
                            <input type="text" class="form-control" name="title" value={newBook.title} onChange={handleInputChange} required />
                        </div>
                        <div class="row mb-3">
                            <div class="col-md-6">
                                <label class="form-label fw-semibold">Penulis</label>
